Presentation of study results

# Broadband acceleration study part 2: methodology and supporting findings

2 February 2016 • Matt Yardley, Ian Adkins, Andrew Daly

Funded by the EBRD Shareholder Special Fund

# Contents

Our approach Forecasting demand Network scenario modelling Socio-economic benefit Results to conclusions

Funded by the EBRD Shareholder Special Fund

- Forecasting demand
- Network scenario modelling
- Socio-economic benefit
- Results to conclusions

Funded by the EBRD Shareholder Special Fund

# We would like to thank the wide range of stakeholders who provided input to the study

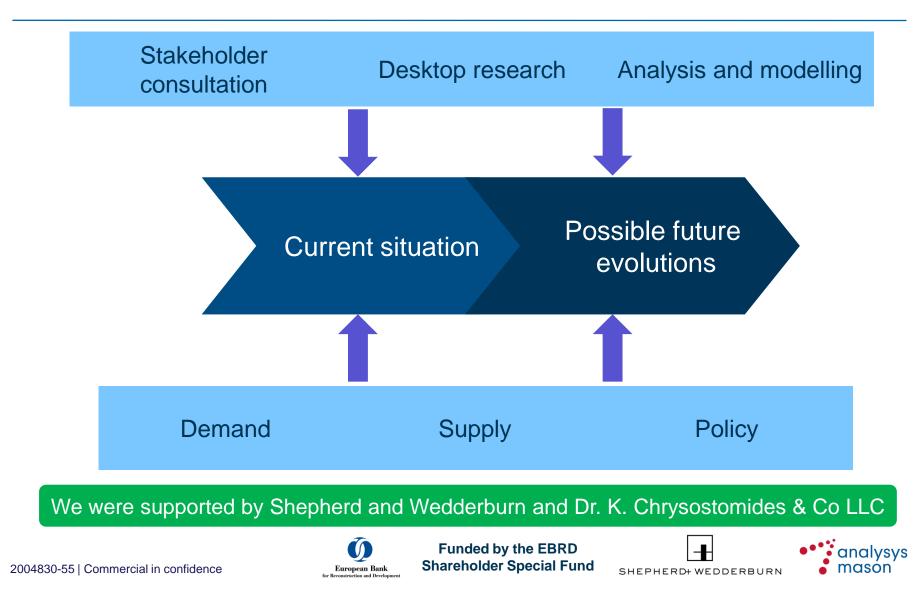

- Chamber of Commerce (CoC)
- Commission for the Protection of Competition (CPC)
- Cyprus Consumers Association (CCA)
- Department for Electronic Communications (DEC)
- Department of Information Technology Services (DITS)
- Electricity Authority of Cyprus (EAC)
- European Commission (EC)

- Operators:
  - -Cablenet
  - -Cyta
  - -Hellas-Sat
  - -MTN
  - Primetel
- Municipalities:
  - -Idalion
  - Limassol
  - Strovolos
  - Union of Cyprus Communities

SHEPHERD+ WEDDERBURN

## We undertook a structured approach

# Our modelling work was designed to explore the wide range of options available to Cyprus

Modelling aspect	Aims of our approach
Demand forecast	<ul> <li>Bound a range of sensible outcomes to manage uncertainty</li> <li>Create a "do nothing" forecast based on demand drivers</li> </ul>
Network scenarios	<ul> <li>Analyse different technologies and forms of competition</li> <li>Consider the commercial viability of nationwide coverage</li> </ul>
Socio- economic benefit	<ul> <li>Consider the socio-economic benefit of NGA for Cyprus</li> <li>Create comparisons between scenarios</li> </ul>

Funded by the EBRD Shareholder Special Fund

**Forecasting demand** 

Network scenario modelling

Socio-economic benefit

Results to conclusions

Funded by the EBRD Shareholder Special Fund

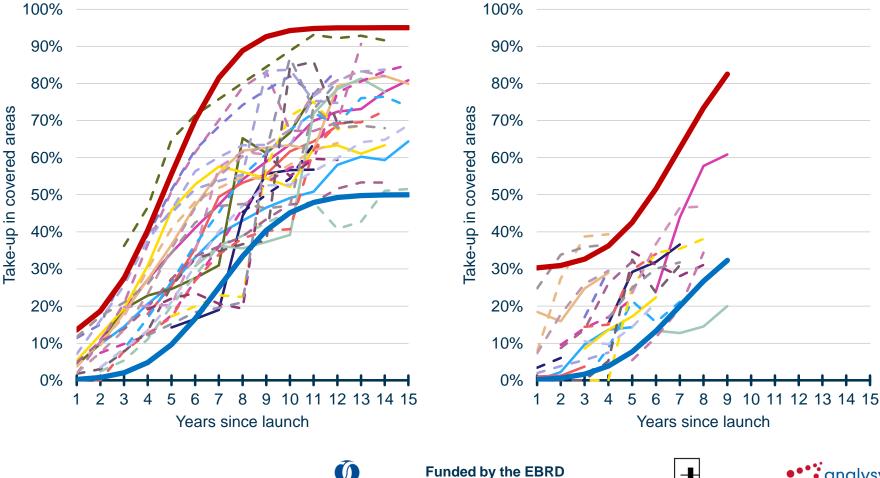

### **Forecasting demand**

## We considered the historical take-up of currentand next-generation broadband across Europe

**First-generation broadband** 

opean Bank

### **Next-generation broadband**

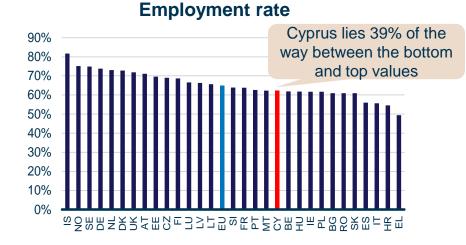

2004830-55 | Commercial in confidence

Shareholder Special Fund SHEPHERD+ WEDDERBURN

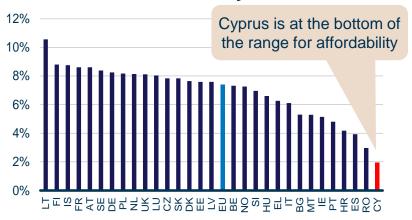

#### **Forecasting demand**

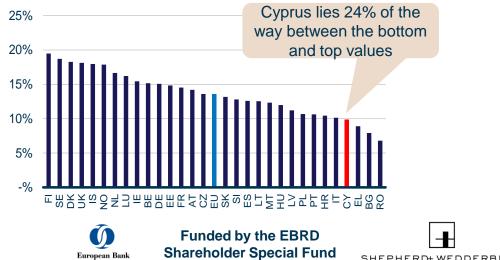

## We ranked Cyprus against other countries for drivers showing some correlation with demand

#### Affordability

#### **DESI** human capital (digital skills)

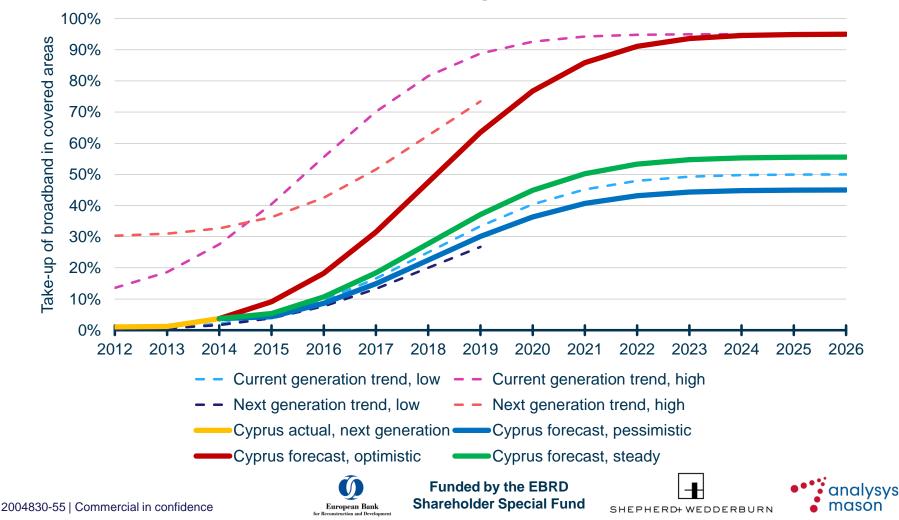

SHEPHERD+ WEDDERBURN

### **Forecasting demand**

## We used the demand driver analysis to guide where Cyprus could end up in the forecast range

Forecast of NGA take-up in covered areas

Forecasting demand

**Network scenario modelling** 

Socio-economic benefit

Results to conclusions

# We defined a list of six scenarios for detailed study, chosen from a longer list

Summary of "revised" scenarios used for detailed study

Scenario	Technology for national network	Wholesale method	Long-term wholesale market share
R1	FTTP-GPON	Active only	65%
R2	FTTP-PTP	Passive and active	76%
R3	FTTP-GPON, FTTC-VDSL, LTE	Active only	65%
R4	FTTP-GPON	Active only	16%
R5	FTTP-PTP	Passive and active	33%
R6	FTTP-GPON, LTE	Active only	16%

Funded by the EBRD

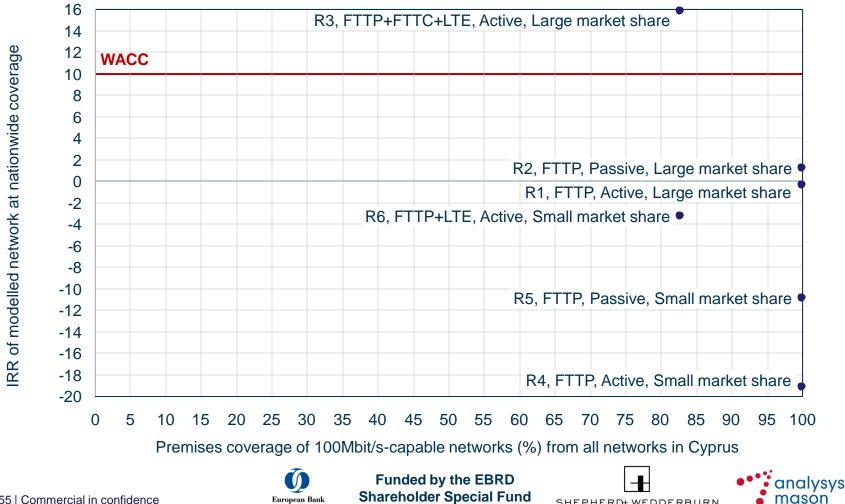

2004830-55 | Commercial in confidence

# Our demand forecast and cost models combine to show viability against 100Mbit/s coverage

Comparison of viability of national network and 100Mbit/s coverage

- Forecasting demand
- Network scenario modelling
- Socio-economic benefit
- Results to conclusions

Funded by the EBRD Shareholder Special Fund

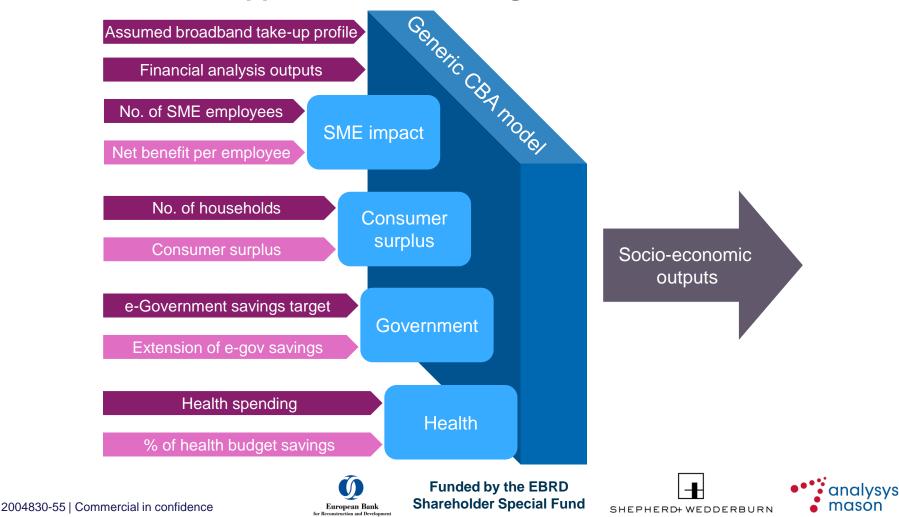

### Socio-economic benefit

# We used a framework agreed with the EIB which considers four areas of socio-economic benefit

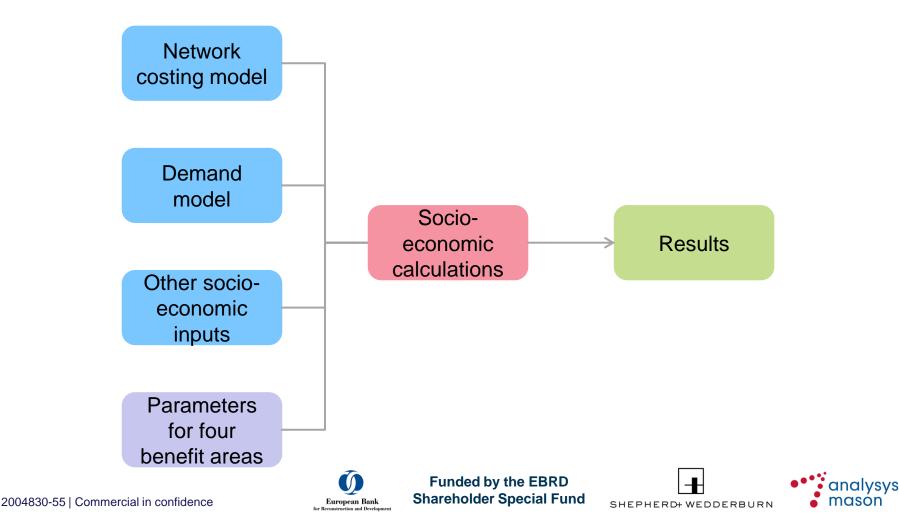

15

Overview of approach to estimating socio-economic benefit

# Where possible we used Cyprus-specific inputs, including the outputs from our other models

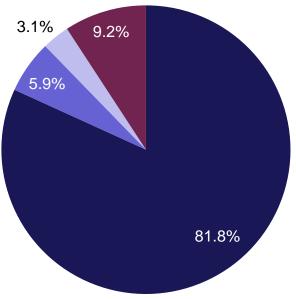

### Summary of socio-economic benefits model flow

#### Socio-economic benefit

# Most of the benefit is derived from SMEs, with the mixed-technology option offering good value

## Proportion of benefits, scenario R3

### Benefit-cost ratio by scenario

Scenario	Benefit–cost ratio
R1	2.58
R2	2.74
R3	3.89
R4	1.07
R5	1.59
R6	2.15

- Business employee benefits
- Household consumer surplus
- e-Government savings
- Tele-health care benefits

# Our quantitative modelling was combined with qualitative assessments to compare scenarios

Decision criterio

	Decision criteria					
Scenario	Attracting investment	Encouraging competition	100Mbit/s availability	Socio- economic benefit–cost ratio	State-aid implications	
R1 (FTTP, active, large market share)	-0.4% IRR	Active only	Full coverage by 2020	2.58	Moderate implications	
R2 (FTTP, passive, large market share)	1.2% IRR	Passive and active options	Full coverage by 2020	2.74	Moderate implications	
R3 (FTTP, FTTC, LTE, active, large market share)	15.8% IRR	Active only	Partial coverage by 2020	3.89	Minimal implications	
R4 (FTTP, active, small market share)	-19.2% IRR	Active only	Full coverage by 2020	1.07	Significant implications	
R5 (FTTP, passive, small market share)	-10.9% IRR	Passive and active options	Full coverage by 2020	1.59	Significant implications'	
R6 (FTTP, LTE, active, small market share)	-3.2% IRR	Active only	Partial coverage by 2020	2.15	Significant implications	

This scenario involves a costeffective mix of technologies offering good broadband speeds, but falls short of the 2020 targets (though they would likely be met in future years)

20

```
Key:
Green = good
Amber = fair
Red = poor
```

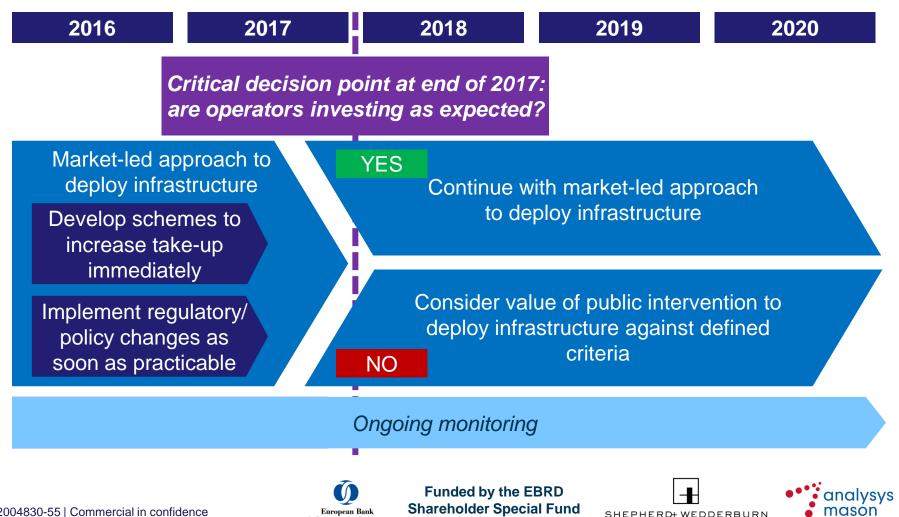

Network and competition scenarios

Funded by the EBRD Shareholder Special Fund

#### Scenario results

# We aim to secure the benefits of market-led mixed technology networks, with a review by end-2017
